

Do **your** teams struggle with **security remediation**?

You grasp the problem, but the solution feels out of reach...

Many organisations battle to quickly resolve security control weaknesses, despite pressure from executives or a regulator. Effective prioritisation and a delivery plan with key stakeholder support can be challenging to achieve:

- Ownership can span several areas. There may be a reluctance to take responsibility, especially under a management spotlight with the risk of failure. Agreement on a way forward can be elusive.
- Some security problems are just tough to fix. A straightforward answer may not exist, with the successful outcome requiring multiple development phases, tests, and piloting.
- The typical security change lifecycle is slow, requiring involvement from numerous functions and heavy oversight. These standard delivery mechanisms can hinder remediation progress.

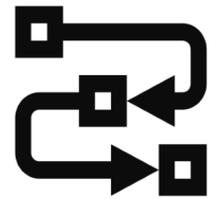

Security issues will deteriorate further while solutions are discussed. Under these circumstances, organisations can end up stuck in limbo.

i-Remediate – quicker, cheaper, and safer than DIY

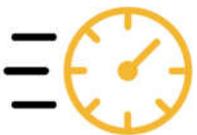

i-Remediate is an end-to-end methodology for resolving security control problems, with some distinct advantages over dedicated in-house management. It provides:

- Pre-defined prioritisation methods for handling security control remediation.
- A structured process to drive remediation delivery.
- The capability to quickly establish and track activities against defined prioritisations.
- Evidence-based reporting to senior management, highlighting progress and issues.
- Steps to cover the eventual transition to BAU, including ongoing remediation measures.

i-Remediate feature highlights

1. **Rapid mobilisation** – with security control remediation activities already categorised systematically, it is easier to engage stakeholders, agree the plan, and get started. This structured approach saves time and money.

2. **Objective clarity** – with candid, independent status reporting, including an automated ‘escalation engine’ to flag remediation performance issues, stakeholders receive actionable evidence to target improvements.

3. **Security and delivery expertise** – i-Remediate was developed as a result of learning what works over many years, in many varied environments. It can help you succeed as well.

4. **Resources to lead and manage** – our specialist staff augmentation service can supplement your delivery team.

Why choose i-confidential?

We do the thinking for you

Take advantage of our extensive background in security remediation.

We will succeed together

Strong relationships are the foundation of delivering change in organisations.

We will keep it simple

Our focus is on delivering effective remediation outcomes for our clients.
